

Recommended Aftercare:

For 24-48 hours after a Body Waxing service, avoid the following:

- **Sunlight:** No exposure to UV rays, no tanning beds. Wear sunscreen on the area you received the waxing service 24-48 hours post receiving your service.
- **Soaking:** Warm water opens your pores and leaves them vulnerable to bacteria and irritation. No long baths, swimming pools, hot tubs, or saunas.
- **Scrubbing:** No harsh exfoliating, physical or chemical, to the service area for 24 hours.
- **Sweating:** No immediate exercise. Sweating as well as tight-fitting athletic wear irritates your open pores.
- **Scents:** Avoid lotions, body washes, or other products with synthetic scents. These are usually listed as "parfum / fragrance" in the ingredients lists. Avoid deodorant on your underarms for 24 hours as well.

Recommended Aftercare Maintenance Products:

After the initial 24-48 hours is complete, you should begin the following aftercare routine:

- **Exfoliate:** Exfoliating with an exfoliation cloth or scrub 2-3 times a week helps get rid of dead skin-build up and allows your hair to grow back without any impediment.
- **Moisturize:** Finipil post-waxing moisturizing cream helps keep the skin on the service area cool and calm, as well as having antibacterial properties. Fur Oil helps smooth and soothe post waxing. Use daily after showering for best results.

Recommended Follow-up Appointments:

Waxing is most successful when it is done consistently. Maintaining a regular schedule of 4-6 weeks between waxes allows for a good amount of hair regrowth without breaking off and damaging your hair in between appointments. Consistency is the key factor to getting your hair on the same growth schedule & a longer smooth time between services.
