

Although rare, please contact a healthcare professional at the first signs of infection/reactions such as swollen eyes, severe discomfort, etc.

- Recommended Aftercare:
 - For the first 24 hours post Brow Henna service:
 - Avoid water, face washing, sweating, and sun for 24hrs
 - Use face wipes for cleansing tonight (avoiding the brow area), and avoid any oils, scrubs, or brightening products
 - If henna results appear too "bold", it's still recommended to hold off from washing until at least the next morning and do the following:
 - First, use a dab of oil and wipe with a dry tissue to soften results. If at that point you still want a softer appearance, then wash. Always use a gentle, non-brightening cleanser. Do not scrub
 - For the time before & after your next Henna appointments:
 - Avoid home grooming of tweezing or trimming, as it can counter the nutrient growth benefits of the henna treatment
 - **ABSOLUTELY NO CHEMICAL TREATMENTS ON YOUR BROWS WITHIN 2 WEEKS PRE OR POST YOUR HENNA BROW TINT TREATMENTS (ex: Brow Tinting or Dyes, Brow Lamination, etc)** - the combination a chemical treatment with the natural-based henna treatment will damage your brows & may cause brow hair loss &/or breakage
 - No spray tanning 2 weeks prior to your Brow Henna. You can spray tan afterwards, but will need to put a protective balm over the brow area, which can remove some of the skin stain
- Recommended Aftercare Maintenance Products:
 - Elleebana Makeup Remover: Use this oil-free gentle cleanser for brow area after the initial 48 hours to retain color longer
 - Brow Makeup such as powders, pencils, pomades, gels and highlighters for your desired look. Your provider will assist you with these recommendations
 - Neubrow: Brow hair growth stimulator to grow the brows of your dreams!
- Recommended Follow-up Appointments:
 - Most regular henna clients tend to rebook between 4-6 weeks. This will ensure your results are properly maintained. No longer than 8 weeks between services is highly recommended
 - Henna is extremely reparative for damaged brows due to over shaping, at home grooming or thinning due to aging. If this is you, consider repeating this service every 4 weeks
- What to expect:
 - Stain/tint results can vary from client to client. Natural looking results always fade faster. Fair-haired clients could see longer results than those with dark hair. The stain on the skin can last from 2-14 days with proper care. The Henna tint on the brow hairs can last from 4-6wks. Dark haired clients may not experience this, however the benefits of the Henna have been delivered
 - Here are a few reasons why Henna fades: oils in the skin can dissolve the stain, dry skin can cause henna to flake off, hormonal imbalances or medications can affect the skin's ability to hold the stain, sun & moisture of any sort will fade the stain on the skin results faster
 - The henna will continue to process for approximately 24hrs post your service, resulting in a slightly darker & 'cooler' tone than it appears to be at the time of your service
